## AMENDMENTS TO THE CLAIMS

### Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

Claim 1 (currently amended): Apparatus for applying negative pressure therapy to a wound site, which comprises an open celled foam pad for application to the wound, a suction tube connecting the foam pad to a collection canister, said canister having a shut-off valve which closes ~~the an~~ outlet from the canister when it is full, a tube connecting the canister to a wall suction point ~~or to a vacuum bottle~~, and a pressure detector connected to the suction tube between the foam pad and the canister for indicating when the pressure in the suction tube crosses a predetermined level.

Claim 2 (previously presented): Apparatus as claimed in claim 1 which includes a flow limiting valve disposed between the canister and the suction source.

Claim 3 (previously presented): Apparatus as claimed in claim 1 which includes a pressure relief valve which is connected to the suction tube between the foam pad and the canister.

Claim 4 (currently amended): Apparatus as claimed in claim 1, further comprising a first transducer for measuring pressure in the tube linking the canister to the wall suction point ~~or to a vacuum bottle~~, and wherein the pressure detector connected to the suction tube between the foam pad and the canister comprises a second transducer.

Application No. 09/807,403  
Amendment dated December 19, 2006  
Reply to Non-Final Office Action of September 25, 2006

Claim 5 (currently amended): Apparatus as claimed in claim 1 which includes a flow rate meter for measuring the rate at which fluid is ~~sucked~~drawn from the wound site.

Claim 6 (previously presented): Apparatus as claimed in claim 5 in which the flow rate meter measures the rate at which the canister is filled.

Claim 7 (previously presented): Apparatus as claimed in claim 6 in which the flow rate meter is an electrical capacitance measuring device.

Claim 8 (currently amended): Apparatus for applying negative pressure therapy to a wound site, which comprises an open-celled foam pad for application to the wound, a suction tube connecting the foam pad to a collection canister, a tube connecting the canister to a wall suction point ~~or a vacuum bottle~~ and a sensor operable to detect when the canister is full.

Claim 9 (previously presented): Apparatus according to claim 8 which includes means for giving a warning that the canister is full and/or shutting off the connection between the canister and the wall suction point.

Claim 10 (previously presented): Apparatus according to claim 8 which further includes means for monitoring pressure at the wound site.

Claim 11 (currently amended): Apparatus according to claim 8 which further includes means for regulating pressure between the canister and the wall suction ~~source~~point.

Claim 12 (previously presented): Apparatus as claimed in claim 1 in which the pressure detector comprises a transducer connected by a branch tube to the suction tube leading from the foam pad to the canister.

Application No. 09/807,403  
Amendment dated December 19, 2006  
Reply to Non-Final Office Action of September 25, 2006

**Claim 13 (previously presented): Apparatus as claimed in claim 3, further comprising a processor operationally coupled to the relief valve and programmed to provide intermittent negative pressure therapy to the wound site.**

**Claim 14 (currently amended): Apparatus for applying negative pressure therapy to a wound site, the apparatus comprising:**

**an open-celled foam pad for application to the wound;**  
**a suction tube connecting the foam pad to a collection canister;**  
**a tube for connecting the canister to a wall suction point ~~or a vacuum bottle~~;**  
**a pressure regulator connected the tube for connecting the canister to said wall suction point ~~or vacuum bottle~~; and**  
**a processor in electronic communication with the pressure regulator to regulate the pressure from said wall suction point ~~or vacuum bottle~~.**

**Claim 15 (previously presented): The apparatus of claim 14, wherein the pressure regulator includes a relief valve, and wherein the processor is configured to actuate the relief valve to relieve pressure at the wound site when pressure at the wound site reaches a set maximum pressure.**
